| Session Goals

- Understand the importance of metrics to drive tuning
- Learn what kinds of metrics are available within PostgreSQL
- Explore how metrics are gathered and applied within PostgreSQL

| Why Capture Query Metrics?

- It's the code
- Except when it's the index
- Unless it's statistics
- Or it could be the structure
- But it's probably the code

| Why Capture Query Metrics

- Knowledge-based decision making
- An understanding of actual behaviors
- No more guessing

| Three Tools in Core

- Logs
- Cumulative Statistics System (CSS)
- Explain/Execution Plans

| Logs

- log_duration
- log_min_duration_statement
- Auto_explain
- Log_statement
- Log_line_prefix

| Logs

- Query using `pg_read_file()`
- Or, query using `file_fdw`
- Can store logs as CSV or JSON for easier querying
- Get pgBadger

| DEMONSTRATION

| Log Shortcomings

- Hard to read
- Requires storage management
- Can negatively impact I/O
- Production may be locked down
- Lack of correlation with other metrics

| Cumulative Statistics System

- Collection is automatic
- Information is aggregated
- Metrics are broken down by type
- Both real-time and historical information is available

Cumulative Statistics System

- `pg_stats_statement` is disabled by default
- Enabling requires cluster restart
- Data collection is automated from there
- It's just queries to see the data

| DEMONSTRATION

| CSS Shortcomings

- Aggregation only, no history
- Enabling requires cluster restart
- Dependent on logs if you need plans

EXPLAIN Plans

- Not “data collection” as with the previous two
- To get measures, you must execute the query
- Fundamental tool for query tuning

EXPLAIN Plans

- EXPLAIN: statistics & plan
- ANALYZE: + actual measures
- BUFFERS: + count of blocks touched

| DEMONSTRATION

EXPLAIN Plans Shortcomings

- To get the measures, you must execute
- Except for logs, one at a time
- No aggregate behaviors

But What About Other Metrics?

- Memory
- CPU
- I/O
- Waits
- Others

| Session Goals

- Understand the importance of metrics to drive tuning
- Learn what kinds of metrics are available within PostgreSQL
- Explore how metrics are gathered and applied within PostgreSQL
